

Production Schedule Tab

Import the Excel schedule • Select scheduled lines • Print the report

Application	JDE Sched (web app)	Revision date	2026-09-28
Applies to	1st, 2nd and 3rd shift	Prepared by	
Tab	Production Schedule	Approved by	

Purpose

Load the day's work orders into JDE Sched from the Excel schedule, mark which production lines are running this shift, and print the Production Line Schedule for the floor.

Before you start

- Have the Excel schedule file saved on the computer (an **.xlsx**, **.xlsm** or **.xls** file, e.g. the JDE work order export).
- Check the **Shift** selector at the top right of the app shows **your** shift. Each shift has its own Production Schedule — importing or printing only affects the shift shown there.
- Changes save automatically and are shared with every device on the same shift.

1. Import the Excel schedule

Step	What to do	Key point / why
1	Open JDE Sched and click the Production Schedule tab.	The Import and Export Excel buttons only appear on this tab.
2	Click Import Excel in the toolbar (Figure 1).	A file window opens.
3	Select the Excel schedule file and click Open .	The app looks for a header row with a LINE (or WORK CENTER) column and a WO (or ORDER NUMBER) column, on any sheet.
4	A message shows "Found N work order row(s). Replace the current Production Schedule?" Check that N looks right, then click OK .	OK replaces every work order on this shift's schedule. Click Cancel to keep the current one.
5	Check the result (Figure 2): each line appears as its own block with its work orders underneath. Spot-check a few WO numbers and quantities against the Excel file.	Exact duplicate rows are skipped automatically. Reading stops at a row that says LEGEND.

CAUTION: If the import was a mistake, click **Undo** (top left) or press Ctrl+Z straight away. To keep a copy of the current schedule before importing, click **Export Excel** first.

Figure 2 — Schedule after importing: legend, Scheduled Lines panel and the first line blocks

Columns the import recognizes

Schedule field	Excel header text (not case-sensitive)
Line	LINE or WORK CENTER
WO #	WO or ORDER NUMBER
Seq	SEQ or SEQUENCE NUMBER
Item	ITEM or 2ND ITEM NUMBER
Product Description	PRODUCT DESCRIPTION or 2ND ITEM NUMBER DESCRIPTION
Count	COUNT or BOTTLE COUNT
Allergen	ALLERGEN or ALLERGEN CODE
WO Qty	WO QUANTITY or BATCH QUANTITY
% Complete	% COMPLETE or WO % COMPLETED
Other columns	BULK ITEM, BOTTLE SIZE, CAP DESCRIPTION, REMARKS, LINE STATUS, DESICCANT

% Actual Complete, Bottles Remaining and Changeover are calculated by the app — they do not need to be in the file. Missing columns are simply left blank.

NOTE: "Could not find a production schedule table (a LINE/WO header row) in that file." means no row has both a Line and a WO header. Open the file in Excel, fix the header names to match the table above, save and import again.

2. Select the scheduled lines

Step	What to do	Key point / why
1	Find the Scheduled Lines panel near the top of the tab (Figure 3).	It lists every line in the imported schedule.
2	Tick the box for each line that is running this shift .	Ticked lines get a green border around their whole block on the printed report so the floor can see at a glance what is running.
3	Untick any line that is not running.	Unticked lines still print — they just have no green border.
4	Optional: in a line's block, set the Line Status of a work order to Ready , PM or Trial (Figure 4).	The line's header turns green (Ready), blue (PM) or purple (Trial) on screen and on the printout.

Scheduled Lines
Check a line to highlight its whole block with a green border on the print report.

Figure 4 — A line block with its work orders; Line Status drop-down outlined

NOTE: Line selections are saved for the shift and shared with every device on it. Re-importing keeps the ticks for lines whose names have not changed.

3. Print the Production Schedule

Step	What to do	Key point / why
1	Scroll down to Print Report Preview (Figure 5). This is exactly what will print.	Check the green borders are on the right lines and nothing is missing.
2	Optional: tick a column name above the preview to hide it from the printout, or drag a column's right edge in the preview to make it wider or narrower.	Hidden columns and widths are remembered for next time.
3	Optional: open Customize Print Design (Figure 6) to change the page: • Orientation — Landscape or Portrait • Print size — <i>Fit to one page</i> shrinks a long schedule onto one sheet; <i>Fixed size</i> prints at the % you set • Margins — None to Extra wide • Title, date, text sizes and colors	Reset to defaults puts the original look back.
4	Scroll back to the top and click Print Report in the toolbar (Figure 7).	The browser's print window opens with only the schedule report on the page.
5	In the print window choose the printer (or Save as PDF). Leave Scale on Default and click Print .	The page size, orientation and margins come from the app. If the colors are missing, open More settings and tick Background graphics .
6	Collect the printout and check it (Figure 8) before posting it on the line.	Every line block, the date under the title, and the green borders on the running lines should be there.

Print Report Preview

Live preview of the printed Production Schedule report. Drag a column's right edge to resize it, or check a column below to hide it - both apply to the actual printed report too.
